(Company Registration No. 726903. A wholly-owned subsidiary of the Soil Association Charity No. 206862)

Introduction

Scope

The Woodmark Generic Standard has been designed for use worldwide in FSC forest management evaluations where there is no existing FSC accredited national standard.

Purpose

This checklist has been designed to comply with FSC-STD-20-002 (v3.0; 2009) Structure, content and local adaptation of Generic Forest Stewardship Standards. This checklist presents the Soil Association Woodmark Forestry Standard. The checklist has been designed for use:

- * As the basis for development of a regionally specific standard, prior to a forest evaluation
- * As the basis for self assessment by a forest manager or owner
- * As the basis for a Woodmark scoping visit
- * As the basis for a Woodmark evaluation

Layout of the standard:

The FSC Principles and Criteria of Forest Stewardship

The Standard is designed to follow the FSC Principles and Criteria for Forest Stewardship (FSC-STD-01-001 (v4.0; 2002). The Standard is divided into 10 sections, each corresponding to one of the FSC principles. The principle itself is written across the top of each section in a grey shaded row. Beneath each FSC principle the Standard lists each of the FSC criteria. The criteria are also in grey shaded rows, stretching across the first two columns of the table.

The Woodmark Standard

Each page of the table is divided into 4 columns.

The **first** column lists all the Soil Association Woodmark indicators for a given FSC Criterion. For example, beneath FSC criterion 1.1 there are three Woodmark indicators, numbered 1.1.1, 1.1.2 and 1.1.3. The Woodmark indicators explain what the owner/manager has to achieve in order to fully meet the FSC criterion. The section on scoring, below, explains what happens if the manager meets some of the indicators but not others, only partially meets the indicators, or feels that the indicator is inappropriate or inapplicable.

The **second** column lists 'Verifiers'. Verifiers are simply elements of evidence that the inspector can use to verify that the Woodmark indicators are met. Sometimes the verifier is a document, such as a written policy or a map; sometimes the inspector can verify the indicator by talking to the forest manager, to workers, or to other people involved with the forest enterprise; sometimes the inspector can verify the indicator by making an observation in the forest itself. The forest manager does not have to have all the documents mentioned as possible verifiers – the listed verifiers are just examples. If a particular document does not exist the inspector will look for another way of confirming that the criterion has been met.

The **third** column has several different purposes, depending on the purpose the generic standard is being used for.

* When the standard is being used as the basis for **development of a regional standard**, the third column is used to record local or regional information and comments that will help tailor the standard to the particular region and situation it is being used in. For example, FSC Criterion 2.2 refers to communities with legal or customary tenure. The local guidance column for the first Woodmark indicator requests information about local communities that have customary or use rights. This information will be annotated before a full inspection, and used to create a regional version of the standard for a specific forest evaluation. Parts of the standard may also be modified during this process – where there is a regional consensus as to what constitutes good forest management on some particular issue, or in a given situation. The only thing that cannot be changed during this process of regionalisation is the FSC Principles and Criteria – these can only be changed by FSC.

An additional and important aspect of regionalisation is that stakeholders and the forest manager are provided with an opportunity to comment on the standard before the evaluation visit. The forest managers' comments will be considered at the same time as the comments of other consultees.

* When the standard is being used for **self assessment** by a forest manager or owner, the third column can be used for recording the forester's comments or questions. These might be notes about the location of relevant documentation, or aide memoires to remind the manager how the particular indicator is met. The forest manager can also use this as the basis for comments or questions to Woodmark – for example to clarify what is meant by a particular indicator.

* The third column can also be used by the inspector during a **pre-evaluation or 'scoping' visit**. In this case the inspector will record observations in the column, and make notes about any aspects of the standard that the forest owner or manager does not comply with. The main gaps will then be summarised in a pre-evaluation report for the forester owner/manager. The inspector will also try to record as much local information as possible during the visit, to help make a properly regionalised standard for the full inspection visit.

Finally, the third column is used by the inspector during a **full evaluation** to record their observations and comments. The inspector will be creating a record of what was seen or observed in order to verify a particular Woodmark indicator, whether anything was missing, or any other information which is relevant to the inspection.

The **fourth** column is only used for a full evaluation. The column is there for the inspector to provide a 'score' for each Woodmark indicator, and each FSC Criterion. The scoring system is described below:

Scoring

The Woodmark certification system is based on the recording of factual observations by the inspector, and secondly on the inspector's professional judgement as to whether each Woodmark indicator and FSC Criterion has been met. However, Woodmark does not insist on perfection. There will be few forest managers who can meet every one of the indicators consistently.

For each Woodmark indicator, the inspector will mark the fourth column with the appropriate symbol (see key below):

Y or 3= Indicator has been met,

N or x = Indicator has not been met or

NA = Indicator is not applicable in this situation.

These marks do not have a rigid effect on the certification decision, but will show the general level of compliance and non-compliance.

The next stage is more important for coming to a decision. For each FSC criterion, the inspector will recommend a score of between 1 and 5, on the following basis:

1. Major Non-Compliance. Performance on the criterion as a whole does not constitute good stewardship of the forest resource. There is either evidence of poor stewardship, or a significant risk that problems will result if corrective action is not taken;

A non-compliance shall be considered major if, either alone or in combination with further non-compliances of other indicators, it results in, or is likely to result in a fundamental failure to achieve the objectives of the relevant FSC Criterion in the Forest Management Unit(s) within the scope of the evaluation.

continue over a long period of time, *or*

are repeated or systematic[1], *or*

affect a wide area, *or*

are not corrected or adequately responded to by the forest managers once they have been identified.

A Major non-compliance will generally result in a Pre-Condition or Major Condition.

2. Minor Non-Compliance. The most important indicators of the criterion are met, but there are elements that should be improved to ensure that good stewardship is maintained in the long term; A non-compliance may be considered minor if:

it is a temporary lapse, *or*

it is unusual/ non-systematic, *or*

the impacts of the non-compliance are limited in their temporal and spatial scale, *and*

prompt corrective action has been taken to ensure that it will not be repeated, *and*

It does not result in a fundamental failure to achieve the objective of the relevant FSC Criterion.

A Minor non-compliance will generally result in a Condition or Observation.

3. Compliance. A score of 3 is what would be expected from a well-managed enterprise of the size, type and complexity of the applicant. This level of achievement represents good forest stewardship.

4. Strength. A score of 4 represents a particularly high level of performance for the criterion. A score of 4 could be awarded when the forest management enterprise has had to overcome particular obstacles to achieve the level of performance shown, or scores particularly highly on some aspects of the criterion, though not on others.

5. Strength. A score of 5 would be awarded for outstanding performance on a particular criterion. A score of 5 recognises outstanding merit in achieving the criterion, through innovative or state of the art management. A score of 5 could be awarded for technical, social or environmental aspects of the management.

[1] The certification body shall determine whether the number and impact of a series of minor non-compliances identified during sampling is sufficient to demonstrate 'systematic' failure (i.e. failure of management systems). If this is the case then the repeated instances of minor non-compliances shall constitute a major non-compliance.

Example of Inspector's completed checklist			
FSC PRINCIPLE # 5: BENEFITS FROM THE FOREST Forest management operations shall encourage the efficient use of the forest's multiple products and services to ensure economic viability and a wide range of environmental and social benefits.			
FSC Criterion	SOIL ASSOCIATION WOODMARK INDICATORS	VERIFIER(S)	COMMENTS and REGIONAL GUIDANCE
	FSC Criterion 5.1 Forest management should strive toward economic viability, while taking into account the full environmental, social, and operational costs of production, and ensuring the investments necessary to maintain the ecological productivity of the forest.		Overall Score for Certification
	5.1.1 There is a work plan and budget for the forest management enterprise showing expected costs and revenues for at least the current financial year.	Annual budget	Budget clearly set out, expected costs and revenues shown for two years
	5.1.2 The income predicted in the annual budget is consistent with the expected rate of harvest of forest products (see 5.6).	Product yields stated in annual budget	
	5.1.3 The income predicted in the annual budget is consistent with product values comparable to regional or national indicators.	Product values stated in annual budget	Product values appear to be somewhat overestimated
	5.1.4 The annual budget incorporates stumpage, royalties or rents as required.	Annual budget	Regional Guidance <i>royalties must be paid to the local forest department administration on annual basis (see regulation FD 4.51a 1989)</i>
	FSC Criterion 5.2 Forest management and marketing operations should encourage the optimal use and local processing of the forest's diversity of products.		Overall Score for Certification
	5.2.1 Forest managers make a proportion of their production available to local enterprises, such as small-scale industries and processing operations, unless there is an overriding reason preventing this. (see 5.4 below for related indicators)	Sales information Discussion with local community	Clear management commitment for encouraging local processors with written strategy, several local companies already supplied with timber.
	FSC Criterion 5.3 Forest management should minimise waste associated with harvesting and on-site processing operations and avoid damage to other forest resources.		Overall Score for Certification
	5.3.1 New on-site processing machinery is selected taking into account the need to minimise timber waste	Evaluation of recent machinery purchases	No recent purchase, no short term requirements for extra machinery
	5.3.2 Timber is extracted and processed promptly after felling	No evidence of wastage through delayed extraction or processing	Some evidence of wastage of timber at the road side
			Inspectors Comments
		Verifiers	

The basis for a certification decision

Woodmark will use the inspector's recommended scores to come reach a certification decision.

Firstly, a score of '1' on any criterion normally represents a major non-compliance with the Standard, and requires some corrective action to be taken by the forest manager before a certificate can be awarded. Possible corrective actions may be discussed with the inspector, but ultimately the inspector cannot provide definitive advice about what corrective action would be sufficient to satisfy the requirements for certification. The inspector's role is to identify the problem; it is the forest manager's role to find the solution.

Secondly, a score of '2' on any criterion normally represents a minor non-compliance, and will result in either a recommended 'condition' for certification, or an 'observation'. 'Conditions' are corrective actions that the forest manager will be asked to implement within a set period of time (commonly 1 to 2 years). A certificate can still be issued, on the condition that the manager makes the corrective action within the specified time. Woodmark will check this at subsequent annual monitoring visits. An 'observation' does not require any corrective action on the part of the manager, but represents an area that will be looked at closely by inspectors on subsequent visits.

Thirdly, the scores for each FSC Principle will be added together and averaged. In order for Woodmark to issue a certificate the forest manager must have an average score of at least 3 (the level representing good forest stewardship) on *each FSC principle*. If the score on any principle averaged less than 3, then Woodmark would not award a certificate even though no specific pre-conditions had been specified. This does not mean the forest enterprise has failed – but that further work is required on that particular principle before a certificate can be issued. If the manager takes corrective actions within a reasonable length of time, then the Woodmark inspector will carry out an inspection of the requirements for that Principle only, and if performance now averages 3 or more then a certificate can be issued.

Where a single FSC criterion – e.g. criterion 6.2 – is itself subdivided, each subdivision will be summed and averaged to get a single figure for the criterion as a whole. It is this figure that will contribute to the overall score for the Principle. However, a score of '1' on a sub-criterion will still be regarded as a major non-conformance, resulting in the issue of pre-condition to certification.

Review of inspector's recommendations and scores

The inspector's recommendations are not final. Woodmark will only make its final certification decision after the inspector's report has been reviewed by the applicant, and after the report has also been reviewed by our Peer Review Panel.

We will take into account the comments of the forest manager, and the Peer Review Panel. We are ready to discuss the pre-conditions, or conditions for issuing a certificate, and to clear up any outstanding issues. The scores recommended by the inspectors may be changed as a result of this process.

Once we have done this we will finalise the certification evaluation report and finalise our certification decision.

Adapted Standard version: ST-FM-001-07-ARG-(v1.0; 2015)				
Adapted Standard date: 25/Feb/2015				
Summary of changes since the previous audit: 				
Scoring summary for each FSC Principle				
FSC PRINCIPLE #1: COMPLIANCE WITH LAWS AND FSC PRINCIPLES Forest management shall respect all applicable laws of the country in which they occur, and international treaties and agreements to which the country is a signatory, and comply with all FSC Principles and Criteria.			0	
PRINCIPIO #1: CUMPLIMIENTO DE LAS LEYES Y LOS PRINCIPIOS DEL FSC El manejo forestal deberá respetar todas las leyes aplicables en el país, los tratados y acuerdos internacionales de los que el país es signatario, y deberá cumplir todos los Principios y Criterios del FSC.				
FSC PRINCIPLE #2: TENURE AND USE RIGHTS AND RESPONSIBILITIES - Long-term tenure and use rights to the land and forest resources shall be clearly defined, documented and legally established.			0	
PRINCIPIO #2: DERECHOS Y RESPONSABILIDADES DE TENENCIA Y USO La tenencia y los derechos de uso a largo plazo sobre la tierra y los recursos forestales, deberán estar claramente definidos, documentados y legalmente establecidos.				
FSC PRINCIPLE #3: INDIGENOUS PEOPLES' RIGHTS The legal and customary rights of indigenous peoples to own, use and manage their lands, territories, and resources shall be recognised and respected.			0	
PRINCIPIO #3: DERECHOS DE LOS PUEBLOS INDÍGENAS Los derechos legales y consuetudinarios de los pueblos indígenas para poseer, usar y manejar sus tierras, territorios y recursos deberán ser reconocidos y respetados.				
FSC PRINCIPLE #4: COMMUNITY RELATIONS AND WORKER'S RIGHTS Forest management operations shall maintain or enhance the long-term social and economic well-being of forest workers and local communities.			0	
PRINCIPIO #4: RELACIONES COMUNALES Y DERECHOS DE LOS TRABAJADORES El manejo forestal deberá mantener o elevar el bienestar social y económico a largo plazo de los trabajadores forestales y de las comunidades locales.				
FSC PRINCIPLE # 5: BENEFITS FROM THE FOREST Forest management operations shall encourage the efficient use of the forest's multiple products and services to ensure economic viability and a wide range of environmental and social benefits.			0	
PRINCIPIO #5: BENEFICIOS DEL BOSQUE El manejo forestal deberá promover el uso eficiente de los múltiples productos y servicios del bosque para asegurar su viabilidad económica y una amplia gama de beneficios ambientales y sociales.				
PRINCIPIO #6: ENVIRONMENTAL IMPACT Forest management shall conserve biological diversity and its associated values, water resources, soils, and unique and fragile ecosystems and landscapes, and, by so doing, maintain the ecological functions and the integrity of the forest.			0	
PRINCIPIO #6: IMPACTO AMBIENTAL El manejo forestal deberá conservar la diversidad biológica y sus valores asociados, los recursos hídricos, los suelos, y los ecosistemas frágiles y únicos, así como los paisajes, preservando, de este modo, las funciones ecológicas y la integridad del bosque.				
FSC PRINCIPLE #7: MANAGEMENT PLAN A management plan -- appropriate to the scale and intensity of the operations -- shall be written, implemented, and kept up to date. The long term objectives of management, and the means of achieving them, shall be clearly stated.			0	
PRINCIPIO #7: PLAN DE MANEJO Se deberá escribir, implementar y mantener actualizado un plan de manejo -de acuerdo a la escala y a la intensidad de las operaciones propuestas. En él deberán quedar claramente establecidos los objetivos del manejo, y los medios para lograr estos objetivos.				
FSC PRINCIPLE #8: MONITORING AND ASSESSMENT Monitoring shall be conducted -- appropriate to the scale and intensity of forest management -- to assess the condition of the forest, yields of forest products, chain of custody, management activities and their social and environmental impacts.			0	
PRINCIPIO #8: MONITOREO Y EVALUACIÓN Deberá realizarse un proceso de monitoreo - de acuerdo a la escala y a la intensidad del manejo forestal - para evaluar la condición del bosque, el rendimiento de los productos forestales, la Cadena de Custodia, las actividades de manejo y sus impactos sociales y ambientales.				

FSC PRINCIPLE #9: MAINTENANCE OF HIGH CONSERVATION VALUE FORESTS Management activities in high conservation value forests shall maintain or enhance the attributes that define such forests. Decisions regarding high conservation value forests shall always be considered in the context of a precautionary approach.	0
PRINCIPIO #9: MANTENIMIENTO DE BOSQUES CON ALTO VALOR DE CONSERVACIÓN Las actividades de manejo en Bosques con Alto Valor de Conservación deberán mantener o incrementar los atributos que definen a dichos bosques. Las decisiones referentes a los bosques con alto valor de conservación deberán tomarse siempre dentro del contexto de un enfoque precautorio.	
FSC PRINCIPLE #10: PLANTATIONS Plantations shall be planned and managed in accordance with Principles and Criteria 1 - 9, and Principle 10 and its Criteria. While plantations can provide an array of social and economic benefits, and can contribute to satisfying the world's needs for forest products, they should complement the management of, reduce pressures on, and promote the restoration and conservation of natural forests.	0
PRINCIPIO #10: PLANTACIONES Las plantaciones deberán ser planeadas y manejadas de acuerdo con los Principios y Criterios del 1 al 9 y con los Criterios del Principio 10. Si bien las plantaciones pueden proporcionar una amplia gama de beneficios sociales y económicos y pueden contribuir a la satisfacción de las necesidades de productos forestales del mundo, éstas deberán complementar el manejo de, reducir la presión sobre y promover la restauración y conservación de los bosques naturales.

6	PRINCIPLE #6: ENVIRONMENTAL IMPACT Forest management shall conserve biological diversity and its associated values, water resources, soils, and unique and fragile ecosystems and landscapes, and, by so doing, maintain the ecological functions and the integrity of the forest.	0	
	PRINCIPIO #6: IMPACTO AMBIENTAL El manejo forestal deberá conservar la diversidad biológica y sus valores asociados, los recursos hídricos, los suelos, y los ecosistemas frágiles y únicos, así como los paisajes, preservando, de este modo, las funciones ecológicas y la integridad del bosque.		

6.1	Assessment of environmental impacts shall be completed appropriate to the scale, intensity of forest management and the uniqueness of the affected resources and adequately integrated into management systems. Assessments shall include landscape level considerations as well as the impacts of on-site processing facilities. Environmental impacts shall be assessed prior to commencement of site-disturbing operations		
	6.1 Deberá completarse una evaluación del impacto ambiental -de acuerdo a la escala y la intensidad del manejo forestal, así como a la singularidad de los recursos afectados -que deberá incorporarse adecuadamente a los sistemas de manejo. Las evaluaciones deberán incluir consideraciones a escala de paisaje así como los impactos causados por las instalaciones de transformación in situ. Los impactos ambientales deberán ser evaluados antes de iniciar las operaciones que pudieran afectar al lugar en cuestión.		
6.1.1	A system is specified that ensures a participatory assessment of environmental impact is made before commencement of any site-disturbing operations. The system: - is appropriate to the scale and intensity of the forest management - takes account of landscape level considerations - is appropriate to the uniqueness of the affected resources [change BASED ON 6.1.1 STDPL201205 VF and 6.1.1 STD- BN 201205-VF].		
	Existe un sistema que asegura que una evaluación <i>participativa</i> del impacto ambiental es realizada antes del comienzo de operaciones que alteran el sitio. El sistema es apropiado para la escala e intensidad del manejo forestal, toma en cuenta consideraciones a nivel de paisaje, y es apropiado para las particularidades de los recursos afectados.		
MA			
S1			
S2			
S3			
S4			
6.1.2	There is a system to ensure that results of the assessment of impacts are taken account of in subsequent operations.		
	Existe un sistema que asegura que los resultados de la evaluación de impactos son tomados en cuenta en operaciones subsecuentes.		
MA			
S1			
S2			
S3

	Existen procedimientos documentados e implementados para proteger tales especies y sus hábitats.	
MA		
S1		
S2		
S3		
S4		

6.2b	Conservation zones and protection areas shall be established, appropriate to the scale and intensity of forest management and the uniqueness of the affected resources.		
	Deberán establecerse zonas de protección y conservación, de acuerdo a la escala y a la intensidad del manejo forestal y a la singularidad de los recursos afectados.		
6.2.4	Areas of special regional importance for biodiversity are identified on maps, and protected from harvesting and other site disturbance.		
	Las áreas de importancia regional para la biodiversidad se encuentran identificados en mapas y protegidos de madereo y otras alteraciones de sitio.		
MA			
S1			
S2			
S3			
S4			

6.2.5	At least 10% of the forest area is designated as a conservation zone, identified on maps, and managed with biodiversity as a major objective.	
	Al menos el 10% del área forestal se encuentra designada como área de conservación, identificada en mapas, y manejada con la biodiversidad como objetivo principal.	
MA		
S1		
S2		
S3		
S4		

6.2.6	At least half of this area (i.e. 5% of the total forest area) is designated as a protected area, identified on maps, and is fully protected from commercial harvesting.	
	Al menos la mitad de esta área, o sea 5% del área total forestal, está designada como área protegida, identificada en mapas, y completamente protegida de madereo comercial.	
MA		
S1		
S2		
S3		
S4		

6.2.7	Selection of conservation zones and protected areas is justified in terms of their potential to maximise their contribution to the maintenance or enhancement of biodiversity	
	La selección de las zonas de conservación y áreas protegidas está justificada en términos de su potencial para maximizar su contribución al mantenimiento o mejora de la biodiversidad.	
MA		
S1		
S2		
S3		
S4		

6.2.8	The protected area includes examples of all existing ecosystems within the forest area.	
	El área protegida incluye ejemplos de todos los ecosistemas que se encuentran dentro del área forestal.	
MA		
S1		
S2		
S3		
S4		

6.2.9	The movement of key plant and animal species between reserved and harvested areas is encouraged by retaining corridors of uncut forest based on streamsides with links up slopes and across ridges to connecting any large patches of forest which will not be harvested.	
	El movimiento de especies animales y vegetales claves entre áreas de reserva y cosechadas es promovido mediante la retención de corredores de bosque no intervenido a lo largo de cursos de agua, conectados a través de laderas y cimas, y comunicando grandes áreas de bosque que no será cosechado.	
MA		
S1		
S2		
S3		
S4		

6.2c	Inappropriate hunting, fishing, trapping and collecting shall be controlled. Deberán controlarse estrictamente las actividades inadecuadas de caza, pesca, captura de animales y recolección de plantas.		
6.2.10	Systems for controlling hunting, fishing, trapping and collecting of animals or plants are documented. Los sistemas para el control de la caza, pesca o recolección de animales o plantas están documentados.		
MA			
S1			
S2			
S3			
S4			
6.2.11	Systems are in place to prevent hunting or trapping of protected species. Existen sistemas establecidos para prevenir la caza o recolección, con trampas u otros métodos, de especies protegidas.		
MA			
S1			
S2			
S3			
S4			
6.3	Ecological functions and values shall be maintained intact, enhanced, or restored, including: a) Forest regeneration and succession. b) Genetic, species, and ecosystem diversity. c) Natural cycles that affect the productivity of the forest ecosystem.		
	6.3 Las funciones y los valores ecológicos deberán mantenerse intactos, aumentarse o restaurarse. Estas funciones incluyen: a) La regeneración natural y la sucesión de los bosques. b) La diversidad genética, de las especies y de los ecosistemas. c) Los ciclos naturales que afectan la productividad del ecosistema forestal.		
6.3.1	The silvicultural system adopted is appropriate to the ecology of the forest. El sistema silvicultural adoptado es apropiado para la ecología del bosque.		
MA			
S1			
S2			
S3			
S4			
6.3.2	Systems that use small clearfell areas, selective felling and create varied age class have been considered. Sistemas que utilizan corta por entresaca de grupos o bosquetes, corta selectiva, y que crean clases variadas de edad, han sido considerados.		
MA			
S1			
S2			
S3			
S4			
6.3.3	Forestry operations must, if appropriate to the silvicultural system, aim for a mixture of compartments differing in size, shape, species, and date of planting and felling, in harmony with the landscape.		
	En tanto sea apropiado para el sistema silvicultural, las operaciones forestales deben dirigirse a obtener una mezcla de compartimientos diferentes en tamaño, forma, especies y fecha de plantación y cosecha, en armonía con el paisaje.		
MA			
S1			
S2			
S3			
S4			
6.3.4	The scale of felling (e.g. coupe size) is commensurate with the natural dynamics of the forest type and the area under consideration (unless clearly justified silvicultural reasons are given). La escala de las áreas de corta simultánea está commensurada con la dinámica natural del tipo forestal y con el área bajo manejo, a menos que existan razones silviculturales claramente justificadas para otras alternativas.		
MA			
S1			
S2			
S3			
S4			
6.3.5	Management of the forest area as a whole is designed to ensure that the full complement of naturally occurring tree species regenerates successfully in the forest area over the duration of the rotation.		

	El manejo del área forestal está integralmente diseñado para garantizar que todo el espectro de especies nativas presentes en el lugar pueda regenerarse exitosamente durante el período de rotación.	
MA		
S1		
S2		
S3		
S4		

6.3.6	Selective felling and thinning regimes are designed to maintain genotypic diversity. Regímenes selectivos de corta y de raleos son diseñados para el mantenimiento de la diversidad genética.	
MA		
S1		
S2		
S3		
S4		

6.3.7	Biodiversity is routinely maintained by the retention of marginal habitats e.g. streamside vegetation, vegetation on rocky outcrops, swamps and heaths. El mantenimiento de la biodiversidad se practica en forma rutinaria a través de la retención de hábitats marginales, tales como la vegetación de márgenes de cursos de agua, la vegetación de afloramientos rocosos, pantanos, o áreas de vegetación achaparrada.	
MA		
S1		
S2		
S3

10.9	Plantations established in areas converted from natural forests after November 1994 normally shall not qualify for certification. Certification may be allowed in circumstances where sufficient evidence is submitted to the certification body that the manager/owner is not responsible directly or indirectly for such conversion.		
	10.9 Las plantaciones procedentes de la conversión de bosques naturales después de noviembre de 1994, normalmente no deberán calificar para la certificación. La certificación podrá permitirse en circunstancias donde se presenten a las entidades de certificación pruebas suficientes de que los administradores/propietarios no han sido responsables directa o indirectamente de dicha conversión.		
10.9.1	The plantation is not established on land converted from natural forest after November 1st 1994 (but see 6.10 and 10.9), unless there is clear evidence that the current owner(s) and manager(s) were not directly or indirectly responsible for the conversion.		

	La plantación no ha sido establecida sobre tierra que ha sufrido conversión de bosque nativo con posterioridad al 1ro. de noviembre de 1994 (ver sin embargo 6.10 y 10.9), a menos que haya clara evidencia de que los actuales dueños o responsables del manejo no fueron ni directa ni indirectamente responsables de la conversión.

Annex 1. National and local forest laws and administrative requirements which apply in Argentina

At the National level, the Ministry of Agriculture, Livestock and Fisheries (MAGyP) is in charge of forest plantations, and the Secretariat of Environment and Sustainable Development (SAyDS) looks after native forests.

The new Law 26.331, "of Minimum standards for the environmental protection of native forests", with the SAyDS as implementation agency, allows for significant public investment in forest control and protection, mandatory zoning and planning of forest areas for the provinces, and a modern management framework. An increased valuation of forests is expected as a result of the law, as well as better coordination between security forces in charge of native and planted forests, as provincial forest agencies (generally called *direcciones forestales*) carry out both functions.

Regarding native forests, the Law (Act) 26.331 was discussed above. On the other hand, production activities on planted forests were promoted since the nineties by the National government through different incentives including industrial promotion zones, technical assistance programmes, low rate loans, tax exemptions and direct subsidies. Act 26.432 (an extension of Act 25.080), promotes investments in new forest enterprises and afforestation. Its implementing agency is the Ministry of Agriculture, Livestock and Fisheries (MAGyP)

Argentina is a federal country and therefore the provinces have direct responsibilities and control over their natural resources. Thus, forest operations shall also take into account a number of provincial norms.

Anexo 1. Legislación y requerimientos administrativos que se aplican en Argentina.

A nivel nacional, la división de competencias en el sector forestal entre el Ministerio de Agricultura, Ganadería y Pesca (MAGyP), que está a cargo de las plantaciones forestales, y la Secretaría de Ambiente y Desarrollo Sustentable (SAyDS) a cargo de los bosques naturales.

La nueva Ley 26.331 de Presupuestos Mínimos de Protección Ambiental de los Bosques Nativos, cuyo organismo de aplicación es la SAyDS, prevé una inversión pública significativa en protección de los bosques nativos, un ordenamiento territorial obligatorio de las áreas forestales por parte de las provincias, y un marco moderno de gestión. Abre una nueva era de la valoración de los bosques nativos y una mayor coordinación entre los cuerpos de seguridad encargados de las plantaciones y bosques nativos, especialmente desde que los organismos forestales provinciales (direcciones de bosques) combinan ambas funciones.

En lo referente a bosques nativos, se ha mencionado arriba la nueva Ley 26.331. Por otro lado, para aumentar la producción en el subsector de bosques implantados, desde principios de los años 90 el gobierno nacional comenzó a ofrecer importantes incentivos para la inversión, mediante mecanismos tales como zonas de promoción industrial, programas de asistencia técnica, créditos bancarios a tasas bajas, exenciones fiscales y subsidios. La Ley 26.432 (extensión y reforma de la Ley 25.080), promueve las inversiones en nuevas empresas forestales y la extensión de las plantaciones existentes. Su organismo de aplicación es el Ministerio de Agricultura (MAGyP).

Es importante señalar que Argentina es un país federal y sus provincias tienen responsabilidad directa sobre el uso de sus recursos naturales. Así, el planeamiento y las operaciones forestales deben tener en cuenta también un número importante de normas provinciales.

Annex 2a. Multilateral environmental agreements

Argentina is party to the following international environmental agreements with relevance for the sustainable management of forest resources:

Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES). Approved by Law 22344.

Convention on the Conservation of Migratory Species of Wild Animals.
Approved by Law 23918.

Convention on Wetlands of International Importance. Approved by Law 23919.
United Nations Framework Convention on Climate Change (UNFCCC). Approved by Law 24295.

Convention on Biological Diversity. Approved by Law 24375.

UN Convention to Combat Desertification. Approved by Law 24701.

Kyoto Protocol to the UNFCCC. Approved by Law 25438.

Anexo 2a. Acuerdos ambientales multilaterales

Argentina es parte en los siguientes acuerdos internacionales relevantes para el manejo sustentable de los recursos forestales.

Convención sobre el Comercio Internacional de Especies Amenazadas de Fauna y Flora Silvestre. Aprobada por Ley 22.344.

Convención sobre la Conservación de las Especies Migratorias de Animales Silvestres. Aprobada por Ley 23.918.

Convenio Relativo a los Humedales de Importancia Internacional especialmente como Habitat de Aves Acuáticas. Aprobado por Ley 23.919.

Convención Marco de las Naciones Unidas sobre Cambio Climático. Aprobada por Ley 24.295.

Convención sobre la Diversidad Biológica. Aprobada por Ley 24.375.

Convención sobre Lucha Contra la Desertificación. Aprobada por Ley 24.701.

Protocolo de Kyoto de la Convención Marco de Naciones Unidas sobre Cambio Climático. Aprobado por Ley 25.438.

Annex 2b. Implications of the Convention of Biological Diversity in Argentina

The National Strategy on Biological Diversity was sanctioned in 2003 by Resolution 91/03 of the Secretariat of Environment and Sustainable Development (SAyDS).

The National Strategy is oriented to establish or reinforce coordination processes at the regional level, in order to facilitate the adoption of common criteria for conservation and the management of ecosystems, species and genetic resources, without affecting provincial responsibilities and administration functions.

Strategy objectives include 1. Promotion, generation and diffusion of sustainable management experiences of ecosystems and populations; 2. a National law of minimum standards for ensuring the sustainability of the use of biological resources; and 3. The promotion of strategic planning processes at the regional level for attaining the sustainable use and preservation of biodiversity in terrestrial and aquatic environments.

The following information was taken from the CBD website which should also be checked for updates: <http://www.cbd.int/countries>

Overview

The Republic of Argentina is classified as one of the world's "megadiverse" countries. Argentina boasts some of the best varieties of ecosystems in the world: 15 continental zones, 3 oceanic zones and the Antarctic region are all represented in its territory. This diversity of ecosystems has led to large species diversity: 9,000 vascular plant species (30% endemics) and 2,380 vertebrate species of which there are 38 endemic species of mammals and 19 endemic species of birds. From this total, 529 species of vertebrates and at least 240 plants are threatened or face extinction. The main threats to biodiversity are conversion of natural land for agriculture and deforestation, however, alien invasive species, industrialization and urbanization are also great contributors to biodiversity loss. Notable advances have been made in regard to the sustainable use of species of wild fauna, biodiversity inventorying, implementation of the Global Taxonomy Initiative and the Global Strategy for Plant Conservation, and the development of the national Clearing-House Mechanism. Work being conducted on access to genetic resources, and the sharing of benefits arising from the utilization of these resources, is at present hampered by lack of agreement from different areas of government. The Argentinian government has recently pushed for increased intersectoral dialogue and agreements to further progress in implementing the Convention.

Number and Extent of Protected Areas

299 protected areas (6.3% of total land area), 11 Ramsar sites and 10 Biosphere reserves (Source: 2003 Earth Trends World Resources Institute Country Profile)

Percentage of Forest Cover

34% (Source: 2005 FAO Global Forest Resources Assessment) Monitoring reports are prepared on a continuous basis and available on the website of the Ministry of Environment and Sustainable Development.

Major features of National Biodiversity Strategy and Action Plan

The general goals of Argentina's National Biodiversity and Action Plan are to: guarantee the conservation and sustainable use of biological resources; reduce adverse effects of production activities on biological diversity; and the equitable sharing of benefits derived from the appropriate use of genetic resources. The NBSAP lays out, according to the themes of the 2010 Biodiversity Target, different objectives and actions for each thematic area. These themes include: sustainable use of biodiversity, restoration of degraded lands, bio-regional planning and use of land, protected areas and education, communication and capacity-building. The actions identified in the NBSAP should serve to strengthen: the integration of biodiversity-related issues in the sectoral plans and programs that lead to the national development and increase in life quality; understanding of functions of genes, species and ecosystems; access to information related to biodiversity by different sectors of society; the process of moving towards models of use and consumption that are compatible with the maintaining of essential ecological processes, while trying to avoid a reduction in the natural capital of Argentina; the fair and equitable sharing of the benefits derived from the use of genetic resources; and the conservation of the cultural heritage of Argentina.

Implementation of the Convention

Measures Taken to Achieve the 2010 Target

See information provided under National Biodiversity Strategy and Action Plan.

Initiatives in Protected Areas

The Federal System for Protected Areas (SIFAP) was recently created in 2003 and a coherent national action plan for the administration of protected areas is yet to be established. Overall, limited progress has been made in regard to this programme of work. Few measures have been taken to establish protected areas in large unfragmented natural areas and to address the under-representation of marine and inland water ecosystems in the existing national and regional systems. However, some steps have been taken for improving the integration of protected areas into broader land and seascapes, including policy and planning, mainly at the provincial level through the creation of biological corridors under the protection of provincial legislation.

Environmental impact assessment guidelines are being applied to only some projects and plans at the moment, such as those dealing with the management of national parks. Legislative and institutional gaps have not yet been comprehensively identified however the importance of addressing such gaps within the context of private-owned land has been acknowledged. Capacity needs require a more thorough assessment although a partial national plan for sustaining the financing for protected areas, supported by the Ministry of Environment and Sustainable Development and international donors, is in place. The National Network for Biosphere Reserves carries out an evaluation every 10 years however the Federal System for Protected Areas has not completed the development of its own evaluation methodology.

Initiatives in Access and Benefit Sharing

No legislation currently governs access to genetic resources although drafting a legislation in this regard has been initiated, with consideration being given to the CBD Bonn Guidelines in the preparation process. Some governmental organizations, such as the National Institute for Agricultural Technology, are exchanging genetic resources in accordance with the rules of certain international protocols. Only a few measures, where species of interest for food are involved, have been taken to ensure that scientific research based on genetic resources and provided by other Parties is developed and carried out with the full participation of these Parties. Also, only some measures have been taken, through projects implemented by the National Institute of Agricultural Technology, other science and technology institutes and the provinces, to ensure the fair and equitable sharing of research results and benefits arising from the commercial and other uses of resources among stakeholders. Argentina has not yet ratified the International Treaty on Plant Genetic Resources for Food and Agriculture however is currently in the process of developing plans compatible with this treaty. Policies to address the role of intellectual property rights in access and benefit-sharing arrangements, with respect to traditional knowledge, are also in preparation. Capacity-building activities have been carried out with local communities to raise awareness of the value of natural resources. Specific measures have been implemented by both governmental and non-governmental organizations.

Initiatives for Article 8(j)

Argentina's National Biodiversity Strategy and Action Plan incorporates actions related to the participation of indigenous communities in activities to implement the Convention. Assistance has been provided to indigenous communities to facilitate the conduct of regional meetings, the development of conservation plans for wild species and identification of the potential benefits that can arise from them.

Anexo 2b. La Convención de Diversidad Biológica y Argentina

La Estrategia Nacional sobre Diversidad Biológica se adoptó en 2003 por la Resolución 91/03 de la Secretaría de Ambiente y Desarrollo Sustentable.

La estrategia se orienta a establecer o reforzar instancias de coordinación en el ámbito regional, que faciliten acordar criterios comunes de conservación y manejo de ecosistemas, especies y recursos genéticos, sin que ello altere las jurisdicciones provinciales y las respectivas facultades administrativas. En este caso, cuando se hace referencia a la escala regional, se refiere a las ecorregiones u otras unidades definidas con criterios ecológicos, tales como las cuencas, dentro del territorio nacional. Propone armonizar en el ámbito regional, en la medida de lo posible, las leyes y normas particulares sobre conservación y uso sostenible de la diversidad biológica. Esto podría lograrse mediante el dictado de normas que contengan presupuestos mínimos sobre conservación y uso sostenible de la diversidad biológica, tendientes a eliminar las asimetrías regionales. Se busca establecer una base de coordinación interinstitucional para operar ante situaciones de emergencia que entrañen peligros graves e inminentes para la diversidad biológica.

Los objetivos de la estrategia incluyen 1. Generar, difundir y fomentar experiencias de manejo sostenible a nivel de ecosistemas y poblaciones; 2. Impulsar el dictado de una ley de presupuestos mínimos nacional, que tienda a garantizar que los usos de los recursos biológicos sean sostenibles y reforzar la capacidad de las instituciones que deban instrumentalizarla, y 3. Promover procesos de planificación estratégica a escala regional para lograr el uso sostenible y la preservación de la biodiversidad de los ambientes terrestres y acuáticos.

Visión general

The Republic of Argentina is classified as one of the world's "megadiverse" countries. Argentina boasts some of the best varieties of ecosystems in the world: 15 continental zones, 3 oceanic zones and the Antarctic region are all represented in its territory. This diversity of ecosystems has led to large species diversity: 9,000 vascular plant species (30% endemics) and 2,380 vertebrate species of which there are 38 endemic species of mammals and 19 endemic species of birds. From this total, 529 species of vertebrates and at least 240 plants are threatened or face extinction. The main threats to biodiversity are conversion of natural land for agriculture and deforestation, however, alien invasive species, industrialization and urbanization are also great contributors to biodiversity loss. Notable advances have been made in regard to the sustainable use of species of wild fauna, biodiversity inventorying, implementation of the Global Taxonomy Initiative and the Global Strategy for Plant Conservation, and the development of the national Clearing-House Mechanism. Work being conducted on access to genetic resources, and the sharing of benefits arising from the utilization of these resources, is at present hampered by lack of agreement from different areas of government. The Argentinian government has recently pushed for increased intersectoral dialogue and agreements to further progress in implementing the Convention.

Nombre y Extensión de las Areas Protegidas

Argentina's National Biodiversity Strategy and Action Plan incorporates actions related to the participation of indigenous communities in activities to implement the Convention. Assistance has been provided to indigenous communities to facilitate the conduct of regional meetings, the development of conservation plans for wild species and identification of the potential benefits that can arise from them.

Annex 3 : Convention on International Trade in Endangered Species (CITES)

Updated from the CITES website 10th August 2010 (www.cites.org)

Latin name

Appendix I:

Latin name	Common/Trade name	Distribution
<i>Abies guatamalensis</i>	Guatemalan fir	Central America
<i>Araucaria araucana</i>	Monkey-puzzle tree	Chile and Argentina
<i>Dalbergia nigra</i>	Brazilian Rosewood	Brazil
<i>Fitzroya cupressoides</i>	Alerce	Costa Rica, Panama, Columbia
<i>Pilgerodendron uviferum</i>		Argentina, Chile
<i>Podocarpus parlatorei</i>	Parlatore's Podocarp	Argentina, Bolivia, Peru

Appendix II:

<i>Aquilaria spp.</i> ⁴	Agarwood	Asia (all species)
<i>Aniba roseodora</i> ¹²		
<i>Bulnesia sarmientoi</i>	Vera, palo santo, ibiocaí	
<i>Caesalpinia echinata</i> ¹⁰	Brazilwood, Pau-Brasil, Pau de Pernambuco and Ibirapitanga	
<i>Caryocar costaricense</i> ⁴	Ajillo	Colombia, Costa Rica, Panama
<i>Gonystylus spp.</i> ⁴	Ramin	Asia (all species)
<i>Guaiacum spp.</i>	Lignum-vitae/Tree of life	Central America, Caribbean
<i>Gyrinops spp.</i> ⁴	Agarwood	Asia (all species)
<i>Oreomunnea pterocarpa</i> ⁴	Gavilaan	Costa Rica, Mexico, Panama
<i>Pericopsis elata</i> ⁵	Afrormosia	Central and West Africa logs
<i>Platymiscium pleiostachyum</i> ⁴		
<i>Prunus africana</i> ⁴	Quira macawood	Central America
<i>Pterocarpus santalinus</i> ⁷	African cherry	Africa and Madagascar
<i>Swietana humilis</i> ⁴	Red Sandalwood	India
<i>Swietana macrophylla</i> ⁶	Honduras Mahogany	Central America
<i>Swietana mahagoni</i> ⁵	Big-leaf Mahogany	Neotropics
<i>Taxus: chinensis</i> ²	Caribbean mahogany	USA, West Indies, Central America
<i>T. cuspidate</i> ²	Chinese Yew	Asia
<i>T. fauana</i> ²	Japanese Yew	Asia
<i>T. sumatrana</i> ²	Tibetan Yew	Asia
<i>T. wallichiana</i> ²	Sumatran Yew	Asia
	Himalayan Yew	Asia

Appendix 3:

<i>Cedrela odorata</i> ⁵	Cigarbox Cedar	Colombia, Guatemala and Peru
<i>Dalbergia retusa</i> ⁵	Cocobolo	Guatemala
<i>Dalbergia stevensonii</i> ⁵		Guatemala
<i>Dipteryx panamensis</i>	Almendro	Costa Rica, Nicaragua
<i>Magnolia liliifera</i> var. <i>obovata</i> ¹	Safan, Champak	Nepal
<i>Podocarpus nerifolius</i> ¹	Yellow Wood	Nepal
<i>Tetracentron sinense</i> ¹	Tetracentrons	Nepal

What is controlled?

1 All parts and derivatives except:

- a) seeds, spores and pollen (including pollinia);
- b) seedling or tissue cultures obtained in vitro, in solid or liquid media, transported in sterile containers; and
- c) cut flowers of artificially propagated plants

d) fruits and parts and derivatives thereof of artificially propagated plants of Vanilla

2 All parts and derivatives except:

- a) seeds and pollen; and
- b) finished products packaged and ready for retail

4 All parts and derivatives except:

a) seeds (including seedpods of Orchidaceae.) spores and pollen (including pollenia). Exemption does not apply to seeds from Cactaceae spp.

Exported from Mexico or seeds of *Beccariophoenix madagascarensis* and *Neodypsis decaryi*.

b) seedling or tissue cultures obtained in vitro, in solid or liquid media, transported in sterile containers;

c) cut flowers of artificially propagated plants;

d) fruits, and parts and derivatives thereof of naturalised or artificially propagated plants of the genus Orchidaceae and of the family Cactaceae

e) stems, flowers and parts and derivatives thereof, of naturalised or artificially propagated plants of the genus Opuntia and Selenicereus

5 Logs, sawn wood and veneer sheets

6 Logs, sawn wood, veneer sheets and plywood

7 Logs, wood chips, powder and extracts

9 All parts and derivatives except those bearing a label

10 Logs, sawn wood, veneer sheets including unfinished wood articles used for the fabrication of bows for stringed musical instruments

11 Logs, sawn wood, veneer sheets, plywood, powder and extracts

12 Logs, sawn wood, veneer sheets, plywood and essential oil (excluding finished products packaged and ready for retail trade.

Soil Association Woodmark supports the inclusion of the following species in Appendix II; all are known to be in international trade and to be suffering or having already suffered substantial decline:

<i>Berchemia zeyheri</i>	Pink Ivorywood
<i>Chamaecyparis lawsoniana</i>	Port Orford cedar
<i>Dalbergia cearensis</i>	Kingwood
<i>Dalbergia frutescens</i>	Tulipwood
	Indian Rosewood,
<i>Dalbergia latifolia</i>	Sonokeling
<i>Dalbergia melanoxylon</i>	African Blackwood
<i>Diospyros celebica</i>	Macassar Ebony
<i>Diospyros crassiflora</i>	African Ebony
<i>Diospyros ebenum</i>	Sri Lankan Ebony
<i>Diospyros muni</i>	Thai Ebony
<i>Diospyros philippinensis</i>	Philippine Ebony
	Utile, Sapele, African
<i>Entandrophragma spp.</i>	Mahogany (All 11 spp.)
<i>Khaya</i>	African Mahogany (All 7 spp.)

Annex 4. Endangered species in Argentina

The IUCN Red List of Threatened Species™ is widely recognized as the most comprehensive, objective global approach for evaluating the conservation status of plant and animal species. The following link can be used to obtain up-to-date information on the conservation status of species in Argentina:

According to the IUCN Red List (2007) there are 52 endangered species of plants and animals in Argentina, 130 species in vulnerable status, 138 near threatened species and 1273 species under the least concern category. See also Annex 3.

The IUCN website should be checked for updates and more detailed information on endangered species in Kenya: <http://www.iucnredlist.org/>.

The following species were retrieved in a search (in June 2015) for forest dwelling species in Argentina which are currently rated as Critically Endangered (CR), Endangered (EN) or Vulnerable (VU).

Vulnerable

[Acanthochelys pallidipectoris \(Chaco Side-necked Turtle\)](#)

Annex 5a. FSC certification and core ILO Conventions

Following the FSC policy document “FSC certification and the ILO Conventions” (**FSC-POL-30-401: 2002**), compliance with all ILO Conventions relevant for forestry is a requirement for FSC forest management certification. Conventions 29, 87, 98, 100, 105, 111, 138, and 182 are Core Standards covered by the 1998 ILO Declaration on Fundamental Principles and Rights at Work and its follow-up.

- 1 Forest managers are legally obliged to comply with all ILO conventions that are ratified in the country of operation (see Annex 5b).
Forest mangers are expected to comply with the eight core (fundamental) ILO conventions in all ILO member countries, by virtue of their country's ILO membership, even if not all the conventions have been ratified (those with a '*' in the list below)
FSC's policy for voluntary certification expects managers to comply with all conventions that have an impact on forestry operations and practices, in all countries (including countries which are not ILO-members, and have not ratified the conventions).

List of ILO Conventions that have an impact on forestry operations and practices:

29* Forced Labour Convention, 1930

87* Freedom of association and protection of the right to organize conventions, 1948.

97 Migration for employment (revised) convention, 1949.

98* Right to organize and collective bargaining convention, 1949.

100* Equal remuneration convention, 1951.

105* Abolition of forced labour convention, 1957.

111* Discrimination (occupation and employment) convention, 1958.

131 Minimum Wage fixing convention, 1970.

138* Minimum age convention, 1973.

141 Rural workers organizations convention, 1975.

142 Human Resources Development Convention, 1975

143 Migrant Workers (Supplementary Provisions) Convention, 1975

155 Occupational Safety and Health Convention, 1981

169 Indigenous and Tribal Peoples Convention, 1989

182* Worst Forms of Child Labour Convention, 1999

ILO Code of Practice on Safety and Health in Forestry Work.

Recommendation 135 Minimum Wage Fixing Recommendation, 1970

Annex 5b. ILO Conventions ratified in Argentina /
Anexo 5b. Convenios de la OIT ratificados por Argentina

Argentina has ratified 80 ILO conventions and one protocol, including the eight "Fundamental Conventions" on Labour. Argentina has also ratified Convention 169 on Indigenous and Tribal Peoples.

La Argentina ha ratificado 80 convenios y un protocolo de la OIT, incluyendo los ocho convenios laborales fundamentales: el Convenio 029 sobre Trabajo Forzoso, el 087 sobre Libertad Sindical, el 098 sobre Derecho de Sindicación y de Negociación Colectiva, C 100 sobre Igualdad de Remuneración, C 105 sobre Abolición del Trabajo Forzoso, C 111 sobre Discriminación, C 138 sobre Edad Mínima y C 182 sobre las Peores Formas del Trabajo Infantil. También ha ratificado el Convenio 169 sobre Pueblos Indígenas y Tribales.

Notes: * If pruning involves tree climbing above 3 m, a fall restricting device should be used. ¹With integrated steel toe for medium or heavy loads. ²Safety trousers incorporating clogging material, in hot climates/weather chain-saw leggings or chaps may be used. Safety trousers and chap contain fibres that are inflammable and melt, and should

Table 1. Personal protective equipment (PPE) appropriate for forestry operations (cont.)

not be worn during fire-fighting. ³Ear plugs and ear valves not generally suitable for forestry because of risk of infection. ⁴For planting of chemically treated plants and for dipping of plants in chemicals see relevant section of Chapter 13. ⁵When planting spiny seedlings or chemically treated plants. ⁶When noise level at work position exceeds 85dB(A). ⁷Chain-saw boots with protective guarding at front vamp and instep. ⁸Cut-resistant material incorporated in the back of the left hand. ⁹When falling branches are likely to cause injury. ¹⁰When pruning to a height exceeding 2.5 m. ¹¹Felling includes debranching and crosscutting. ¹²When using a hand saw. ¹³When extracting near unstable trees or branchwood. ¹⁴Only if manipulating logs; gloves with heavy-duty palm if handling wire choker rope or tether line. ¹⁵Highly visible colours. ¹⁶With chin strap. ¹⁷For required tree-climbing equipment see Chapter 15 of this code. ¹⁸Climbing helmets are preferable; if they are not available, safety helmets with chin straps may be used.

Annex 6. Stakeholder issues relating to standard

Adaptation of the Woodmark Generic Standard (WGS) started with a technical review that systematically compared the WGS to the draft FSC-STD-ARG-01 AAAA-MM Norma Plantaciones Argentina ESP. This review took place on January-June 2015. The consultation process started on 28th February 2015. Public consultation was carried out between February and May 2015. Responses were asked to be sent by 15th April, but also later responses were accepted and considered, with the last response received on 21st May 2015. The final Draft of the STD was drafted on 26th June 2015. 63 interested parties were consulted, mainly by electronic mail. 14 responses were received. 5 responses included comments or proposals on the standard. Comments were analyzed and this resulted in changes to 9 indicators. They were 3.1.1, 3.2.3 (only Spanish text modified), 6.3.2 (only Spanish text modified), 6.4.1, 6.5.6, 6.6.13, 10.5.1, 10.5.2 and 10.6.4.

Changes resulting from the consultation process are described below:

Indicator 3.1.1: As a result of stakeholder comment migratory groups using those areas (in or around FMU) were included within the scope of the indicator (not only those living in them).

3.2.3, 6.3.2: Style and vocabulary correction, only on Spanish text.

6.4.1, 10.5.1, 10.5.2: The original indicators 10.5.1 and 10.5.2 referred to Criterion 6.2b. The original group of indicators under criteria 10.5 and 6.2b were giving room to ambiguous interpretations on obligations to restore areas of plantation to native forests. Specifically, and as a forest company commented, an NGO interpreted that those obligations within indicators of 10.5 were irrespective of the area already under conservation by the company within the FMU. On the other hand, both 10.5.1 and 10.5.2 started with the words "Consistent with Criterion 6.2b" (Indicators under 6.2b specified a minimum percentage of forest area for conservation/protection).

6.4.1, 10.5.1, 10.5.2 (Cont.): After an analysis, 10.5.1 and 10.5.2 were modified to incorporate all requirements contained in the draft Argentine norm for plantations (FSC-STD-ARG-01 AAAA-MM) and also those in "Estándares Interinos de Rainforest Alliance/ SmartWood para Evaluaciones de Manejo Forestal en Argentina (Nov. 2006)" (the latter being the ones that were being used by Woodmark in Argentina to this date). Simultaneously, 6.4.1 was modified in agreement with the Argentine draft norm and in order to quantify the area of natural ecosystems under protection according to the scale and intensity of the operation, following the relevant Criterion.

6.5.6.: Obligation to take into account the characteristics of the protected watercourse were incorporated for defining width of buffer areas.

6.6.13: Special characteristics of the Parana Delta Region and its system of artificial channels/ditches for water management given special consideration in chemical application and buffer zones.

10.6.4: Requirement to define and map the limitations for use of the existing soils before the planning of operations, road building, site preparation and plantation establishment is incorporated. Original text mentioned a general requirement of soil study and map.

Anexo 6. Cuestionamientos de partes interesadas en relación con el estándar

La Adaptación del Woodmark Generic Standard (WGS) comenzó como una revisión técnica que comparó en forma sistemática el WGS con el borrador FSC-STD-ARG-01 AAAA-MM Norma Plantaciones Argentina ESP. La revisión tuvo lugar en los meses comprendidos entre Enero y Junio de 2015. El proceso de consulta comenzó el 28 de Febrero de 2015. La consulta pública se llevó a cabo entre Febrero y Mayo de 2015. Se pidió que las respuestas se enviaran antes del día 15 de Abril, aunque se aceptaron y consideraron respuestas después de esta fecha, siendo la última respuesta recibida el 21 de Mayo de 2015. El Borrador final del Estándar fue realizado el 26 de Junio de 2015. 63 partes interesadas fueron consultadas. Respondieron 14 de ellas. Envieron propuestas o comentarios sobre el estándar 5 de los consultados. Los comentarios fueron analizados y esto resultó en modificaciones a 9 (nueve) indicadores. Estos son 3.1.1, 3.2.3 (modificado sólo texto en español), 6.3.2 (modificado sólo texto en español), 6.4.1, 6.5.6, 6.6.13, 10.5.1, 10.5.2 y 10.6.4. Los cambios introducidos tanto en la primera revisión como luego de la consulta se muestran en la checklist en cursiva. Estos últimos se señalan además en azul.

Se explican a continuación los fundamentos de los cambios que resultaron de la consulta pública:

Indicador 3.1.1: A sugerencia de parte interesada se incluyeron los grupos migratorios que usan esas áreas (no solo los que viven en ellas).

3.2.3 y 6.3.2: Corrección de estilo y vocabulario, solamente en el texto en español. En 6.3.2 se utilizó la traducción correcta del texto en inglés ("Corta por entresaca de grupos o bosquetes"), ya que el texto original sugería erróneamente raleos ("aclareos").

6.4.1, 10.5.1 y 10.5.2: Los indicadores originales 10.5.1 y 10.5.2 hacían referencia al Criterio 6.2b, que en sus indicadores obliga a designar con distintos niveles de protección ciertos porcentajes (10% y 5%) del área de bosque. Específicamente 10.5.2 hacía referencia a restauración de un 5% de plantación a bosque nativo. El conjunto de estos indicadores de ambos criterios (10.5 y 6.2b) presentaba una ambigüedad que podía prestarse para interpretaciones diferentes. Una compañía forestal comentó que en reunión de consulta con una ONG 10.5.2 fue interpretado como obligando a restaurar un 5% de la plantación en forma irrespectiva del área ya conservada o protegida por la firma. Por otro lado, la referencia al Criterio 6.2.b en la versión original de ese indicador ("10.5.2 - En forma acorde con Criterio 6.2b al menos un 5% de la plantación debería ser manejada para restaurar el área a bosque nativo") sugiere que esta obligación está asociada a la obligación de cumplir con 6.2b, esto es, proteger en forma estricta un 5% del área de bosque.

6.4.1, 10.5.1 y 10.5.2 (Cont.): Como resultado de estos comentarios se decidió cambiar los indicadores 10.5.1 y 10.5.2 incorporando en ellos todos los requerimientos contenidos para el Criterio 10.5 en el borrador de la norma argentina para plantaciones (FSC-STD-ARG-01 AAAA-MM) y también los contenidos en los "Estándares Interinos de Rainforest Alliance/ SmartWood para Evaluaciones de Manejo Forestal en Argentina (Nov. 2006)" (estos últimos eran los que venían siendo temporalmente utilizados por Woodmark en Argentina). A la vez se modificó 6.4.1 para cuantificar la protección de muestras de ecosistemas naturales existentes, en función de la escala e intensidad del manejo forestal y en todo de acuerdo con el borrador de la norma argentina mencionada.

6.5.6. Se incorpora la obligación de considerar "dimensiones acordes a las características del recurso a proteger" cuando se construyen zonas de amortiguamiento alrededor de cursos permanentes de agua.

6.6.13. Se considera en forma especial a canales artificiales construidos para el manejo de aguas en la UMF en la Región del Delta del Río Paraná en cuanto a restricciones al uso de químicos en forma cercana a los mismos. En esa zona inundable el grado de sistematización mediante zanjeos es de una intensidad muy alta y el manejo apropiado de químicos debe tener en cuenta otros requerimientos.

10.6.4. Se incorpora el requerimiento de definir y mapear las limitaciones de uso de los suelos presentes en forma previa a la planificación de actividades, construcción de caminos, preparación del sitio y establecimiento, reemplazando al requerimiento original expresado en términos generales como estudio y mapa de suelos.

Annex 7. Pesticides

FSC – Definitions and interpretations

FSC has adopted the following definitions of the terms ‘pest’ and ‘pesticide’, approved by the FSC Board of Directors in December 2005:

Pest: Organisms, which are harmful or perceived as harmful and as prejudicing the achievement of management goals or the desired yields or profits. Some pests, especially introduced exotics, may also pose serious ecological threats, and suppression may be recommended. They include animal pests, plant weeds, pathogenic fungi and other micro-organisms.

Pesticide: (including fungicide and herbicide) Any substance or preparation prepared or used in protecting plants or wood or other plant products from pests; in controlling pests or in rendering such pests harmless. (This definition includes insecticides, rodenticides, acaricides, molluscicides, larvaecides, fungicides and herbicides).

Chemicals listed on the next page are classed as “highly hazardous” and should not be used. The list is based Annex 1 and 2 from FSC Guidance Document (FSC-GUI-001: May 2007) on Implementation of the FSC Pesticides Policy (FSC-POL-30-601: December 2005). Chemicals within Class IA of WHO’s Extremely hazardous technical grade active ingredients in pesticides are indicated with a '*' and those within Class IB are indicated with '**'.

The FSC board committee may approve temporary exceptions. Revised lists will be published and circulated when necessary.

See www.fsc.org – for chemicals policy updates.

Annex 7b Highly Hazardous Chemicals (see Annex 7b for references)

Name of chemical

2-(2,4-DP), dma salt (= dichlorprop, dma salt)	DDT	Furathiocarb **	Pentachlorophenol **
2,4,5-T	Deltamethrin	Gamma-HCH, lindane	Permethrin
2,4-D, 2-ethylhexyl ester	Demeton-S-methyl	Heptachlor	Phenylmercury acetate *
3-Chloro-1,2-propanediol**	Diazinon**	Heptenophos **	Phorate *
Acrolein**	Dicamba, dma salt	Hexachlorobenzene *	Phosphamidon *
Aldicarb*	Dichlorvos**	Hexazinone	Propaquizafop
Aldrin	Dicofol	Hydramethylnon	Propetamphos
Allyl alcohol **	Dicrotophos**	Isoxaben	Propyzamide
Alpha-cypermethrin	Dieldrin	Isoxathion **	Quintozene
Aluminium phosphide	Dienochlor	Lamba-cyhalothrin	Simazine
Amitrole	Difenacoum*	Lead arsenate **	Sodium arsenite **
Atrazine	Difethialone*	Mancozeb	Sodium cyanide **
Azinphos-ethyl**	Diflubenzuron	Mecarbam **	Sodium fluoroacetate *
Azinphos-methyl**	Dimethoate	Mercuric chloride *	Sodium fluoroacetate, 1080
Benomyl	Dinoterb **	Mercuric oxide **	Strychnine **
Blasticidin-S**	Diphacinone*	Metam sodium	Sulfluramid
Brodifacoum*	Diquat dibromide	Metasystox	Sulfotep *
Bromadiolone*	Disulfoton*	Methamidophos **	Tebufenozide
Bromethalin*	Diuron	Methidathion **	Tebupirimfos *
Butocarboxim**	DNOC **	Methiocarb **	Tefluthrin **
Butoxycarboxim**	Edifenphos**	Methomyl **	Terbufos *
Cadusafos**	Endosulfan	Methoxychlor	Terbumeton
Calcium arsenate**	Endrin	Methylarsonic acid (monosodium methanearsenate, MSMA)	Terbutylazine
Calcium cyanide*	EPN *	Methylbromide	Terbutryn
Captafol*	Epoxiconazole	Mevinphos*	Thallium sulfate
Carbaryl	Esfenvalerate	Mirex	Thiodicarb
Carbofuran*	Ethiofencarb **	Monocrotophos **	Thifanox
Carbosulfan	Ethion	Naled	Thiometon
Chlordane	Ethoprophos *	Nicotine **	Toxaphene (Camphechlor)
Chlorethoxyfos*	Famphur **	Omethoate **	Triadimenol
Chlorfenvincphos**	Fenamiphos **	Oryzalin	Triazophos
Chlormephos	Fenitrothion	Oxamyl **	Trifluralin
Chlorophacinone*	Fipronil	Oxydemeton-methyl **	Vamidothion
Chlorothalonil	Flocoumafen *	Oxyfluorfen	Warfarin
Chlorpyrifos	Fluazifop-butyl	Paraquat	Zeta-cypermethrin
Coumaphos**	Flucythrinate **	Parathion *	Zinc phosphide
Coumatetralyl**	Flufenoxuron	Parathion-methyl	
Cyfluthrin	Fluoroacetamide **	Paris green **	
Cypermethrin	Formetanate **	Pendimethalin	

Annex 8. Categories of High Conservation Value Forests (HCVF: Proforest toolkit)

A High Conservation Value area is the area of natural habitat required to maintain or enhance a High Conservation Value. A HCV area may be part of a larger habitat, for example a riparian zone protecting a stream that is the sole supply of drinking water to a community or a patch of a rare limestone-loving forest within a larger forest area. Elsewhere, the HCV area may be the whole of a habitat, for example a large forest management unit, when that forest contains several threatened or endangered species that range throughout the forest. Any habitat type – boreal, temperate or tropical, natural or modified by humans, can potentially be designated an HCV area, because HCV designation relies solely on the presence of High Conservation Values within the habitat. The Proforest Toolkit proposes the following categories: (see www.hcvnetwork.org for further information).

HCVF 1. Areas containing globally, regionally or nationally significant concentrations of biodiversity values (e.g. endemism, endangered species, refugia).

For example, the presence of several globally threatened bird species within a Kenyan montane forest.

HCVF 2. Globally, regionally or nationally significant large landscape-level areas where viable populations of most if not all naturally occurring species exist in natural patterns of distribution and abundance.

For example, a large tract of Mesoamerican flooded grasslands and gallery forests with healthy populations of Hyacinth Macaw, Jaguar, Maned Wolf, and Giant Otter, as well as most smaller species.

HCVF 3. Areas that are in or contain rare, threatened or endangered ecosystems.

For example, patches of a regionally rare type of freshwater swamp in an Australian coastal district.

HCVF 4. Areas that provide basic ecosystem services in critical situations (e.g. watershed protection, erosion control).

For example, forest on steep slopes with avalanche risk above a town in the European Alps.

HCVF 5. Areas fundamental to meeting basic needs of local communities (e.g. subsistence, health).

For example, key hunting or foraging areas for communities living at subsistence level in a Cambodian lowland forest mosaic.

HCVF 6. Areas critical to local communities' traditional cultural identity (areas of cultural, ecological, economic or religious significance identified in cooperation with such local communities).

For example, sacred burial grounds within a forest management area in Canada.

GLOSSARY

Words in this document are used as defined in most standard English language dictionaries. The precise meaning and local interpretation of certain phrases (such as local communities) should be decided in the local context by forest managers and certifiers. In this document, the words below are understood as follows:

Biological diversity: The variability among living organisms from all sources including, inter alia, terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are a part; this includes diversity within species, between species and of ecosystems. (see Convention on Biological Diversity, 1992)

Biological diversity values: The intrinsic, ecological, genetic, social, economic, scientific, educational, cultural, recreational and aesthetic values of biological diversity and its components. (see Convention on Biological Diversity, 1992)

Biological control agents: Living organisms used to eliminate or regulate the population of other living organisms.

Chain of custody: The channel through which products are distributed from their origin in the forest to their end-use.

Chemicals: The range of fertilizers, insecticides, fungicides, and hormones which are used in forest management.

Criterion (pl. Criteria): A means of judging whether or not a Principle (of forest stewardship) has been fulfilled.

Customary rights: Rights which result from a long series of habitual or customary actions, constantly repeated, which have, by such repetition and by uninterrupted acquiescence, acquired the force of a law within a geographical or sociological unit.

Ecosystem: A community of all plants and animals and their physical environment, functioning together as an interdependent unit.

Endangered species: Any species which is in danger of extinction throughout all or a significant portion of its range.

Exotic species: An introduced species not native or endemic to the area in question.

Forest integrity: The composition, dynamics, functions and structural attributes of a natural forest.

Forest management/manager: The people responsible for the operational management of the forest resource and of the enterprise, as well as the management system and structure, and the planning and field operations.

Genetically modified organisms: Biological organisms which have been induced by various means to consist of genetic structural changes.

High Conservation Value Forests: High Conservation Value Forests are those that possess one or more of the following attributes:

- a) forest areas containing globally, regionally or nationally significant :
 - concentrations of biodiversity values (e.g. endemism, endangered species, refugia); and/or
 - large landscape level forests, contained within, or containing the management unit, where viable populations of most if not all naturally occurring species exist in natural patterns of distribution and abundance
- b) forest areas that are in or contain rare, threatened or endangered ecosystems
- c) forest areas that provide basic services of nature in critical situations (e.g. watershed protection, erosion control)

d) forest areas fundamental to meeting basic needs of local communities (e.g. subsistence, health) and/or critical to local communities' traditional cultural identity (areas of cultural, ecological, economic or religious significance identified in cooperation with such local communities).

Indigenous lands and territories: The total environment of the lands, air, water, sea, sea-ice, flora and fauna, and other resources which indigenous peoples have traditionally owned or otherwise occupied or used. (Draft Declaration of the Rights of Indigenous Peoples: Part VI)

Indigenous peoples: "The existing descendants of the peoples who inhabited the present territory of a country wholly or partially at the time when persons of a different culture or ethnic origin arrived there from other parts of the world, overcame them and, by conquest, settlement, or other means reduced them to a non-dominant or colonial situation; who today live more in conformity with their particular social, economic and cultural customs and traditions than with the institutions of the country of which they now form a part, under State structure which incorporates mainly the national, social and cultural characteristics of other segments of the population which are predominant." (Working definition adopted by the UN Working Group on Indigenous Peoples).

Landscape: A geographical mosaic composed of interacting ecosystems resulting from the influence of geological, topographical, soil, climatic, biotic and human interactions in a given area.

Local laws: Includes all legal norms given by organisms of government whose jurisdiction is less than the national level, such as departmental, municipal and customary norms.

Long term: The time-scale of the forest owner or manager as manifested by the objectives of the management plan, the rate of harvesting, and the commitment to maintain permanent forest cover. The length of time involved will vary according to the context and ecological conditions, and will be a function of how long it takes a given ecosystem to recover its natural structure and composition following harvesting or disturbance, or to produce mature or primary conditions.

Native species: A species that occurs naturally in the region; endemic to the area.

Natural cycles: Nutrient and mineral cycling as a result of interactions between soils, water, plants, and animals in forest environments that affect the ecological productivity of a given site.

Natural Forest: Forest areas where many of the principal characteristics and key elements of native ecosystems such as complexity, structure and diversity are present, as defined by FSC approved national and regional standards of forest management.

Non-Timber Forest Products (NTFPs): All forest products except timber, including other materials obtained from trees such as resins and leaves, as well as any other plant and animal products.

Other forest types: Forest areas that do not fit the criteria for plantation or natural forests and which are defined more specifically by FSC-approved national and regional standards of forest stewardship.

Plantation: Forest areas lacking most of the principal characteristics and key elements of native ecosystems as defined by FSC-approved national and regional standards of forest stewardship, which result from the human activities of either planting, sowing or intensive silvicultural treatments.

Principle: An essential rule or element; in FSC's case, of forest stewardship.

Silviculture: The art of producing and tending a forest by manipulating its establishment, composition and growth to best fulfill the objectives of the owner. This may, or may not, include timber production.

Succession: Progressive changes in species composition and forest community structure caused by natural processes (nonhuman) over time.

Tenure: Socially defined agreements held by individuals or groups, recognized by legal statutes or customary practice, regarding the "bundle of rights and duties" of ownership, holding, access and/or usage of a particular land unit or the associated resources there within (such as individual trees, plant species, water, minerals, etc).

Threatened species: Any species which is likely to become endangered within the foreseeable future throughout all or a significant portion of its range.

Use rights: Rights for the use of forest resources that can be defined by local custom, mutual agreements, or prescribed by other entities holding access rights. These rights may restrict the use of particular resources to specific levels of consumption or particular harvesting techniques.

Woodmark Standard Adaptation Process		
FSC-Ref	FSC-STD-20-003 (v3.0)	
Woodmark procedure	PP-FM-001 Adaptation of Generic Standard	
Summary	In countries where there is no FSC-endorsed national standard Woodmark has adapted the Woodmark Generic Forestry Standard.	
Amendments		
Date	Details	Author/ Approved
01/10/2010	Page 1: SA Woodmark and FSC logo updated Page 2: References to superseded FSC docs updated Page 4 and 7: References to 'recommendations' replaced with 'observations' References to 'norm/s' replaced with 'indicator/s' Page 52 onwards: Annexes added and numbering re-structured. New index for annexes added with this table for recording amendments. Footer updated to ST-FM-001-07 Oct 2010	LC/MR
01/10/2012	Updated Excel checklist to include cover sheet, introduction and annexes i.e. Excel doc can now be used as stand-alone document for WM Adapted Standard.	LC/MR
28/02/2015	Adaptation of the Woodmark Generic Standard (WGS) started with a technical review that systematically compared the WGS to the draft FSC-STD-ARG-01 AAAA-MM Norma Plantaciones Argentina ESP. This review took place on January–February 2015. Subsequently a consultation process started. Public consultation was carried out between February and May 2015. Between 28 February and 4 March 2015 interested parties were invited to send comments. Responses were asked to be sent by 15 April. Last responses were received on 21 May. 63 interested parties were consulted, mainly by electronic mail. 14 responses were received. 5 responses included comments or proposals on the standard. Comments were analyzed and this resulted in changes to 9 indicators. They were 3.1.1, 3.2.3 (only Spanish text modified), 6.3.2 (only Spanish text modified), 6.4.1, 6.5.6, 6.6.13, 10.5.1, 10.5.2 and 10.6.4. Changes (both those introduced in the first review and those introduced after the stakeholder consultation) are in italics in the checklist. Changes introduced after stakeholder consultation are in blue colour.	MR/LC
28/02/2015	<i>La Adaptación del Woodmark Generic Standard (WGS) comenzó como una revisión técnica que comparó en forma sistemática el WGS con el borrador FSC-STD-ARG-01 AAAA-MM Norma Plantaciones Argentina ESP. Esta revisión tuvo lugar entre enero y febrero de 2015, y subsecuentemente se inició un período de consulta pública. El Período de consulta tuvo lugar entre febrero y mayo de 2015. Entre el 28 de febrero y el 4 de marzo se invitó a partes interesadas a enviar comentarios. Se solicitó enviar respuestas antes del 15 de abril. Se recibieron respuestas hasta el 21 de mayo. 63 partes interesadas fueron consultadas. Respondieron 14 de ellas. Envieron propuestas o comentarios sobre el estándar 5 de los consultados. Los comentarios fueron analizados y esto resultó en modificaciones a 9 (nueve) indicadores. Estos son 3.1.1, 3.2.3 (modificado sólo texto en español), 6.3.2 (modificado sólo texto en español), 6.4.1, 6.5.6, 6.6.13, 10.5.1, 10.5.2 y 10.6.4.</i> <i>Los cambios introducidos tanto en la primera revisión como luego de la consulta se muestran en cursiva. Estos últimos se señalan además en azul.</i>	MR/LC
